experience

ITC - Dallas, TX

November 2018 to present

- ITC purchased AccuAuto in 2019. I was kept on and moved to their own website development team.
- Learned their custom website platform and greatly expanded by JS knowledge.
- Worked my way to lead FrontEnd Web Developer, focused mostly on problem solving and custom site building.
- Helped to create team environment to facilitate knowledge sharing and communication.

Assurance Systems/AccuAuto - Norcross, GA

September 2010 to 2018

- Started working part time as a receptionist, answering overflow tech support calls. Many varying tasks from advertising for CE classes to mapping sales trips
- In 2012 we began a new project, creating useful websites for Independent Insurance Agents. I was asked to come on full time and take over the creation of these websites, which I did in May of 2012. I had no previous knowledge in the area, but learned quickly through researching online.
- Set up the forms and systems for creating these websites from client contact to finished product.
- The AgencyThrive Project grew to include over 300 sites being maintained.

United Community Bank - Gainesville, Ga

July 2005 to August 2008

- Upon entering Gainesville State College I began working part time in the Gainesville Loan Operations of United Community Bank.
- Hired on a temporary basis to aid in the initial setting up of the Gainesville branch's Loan Operations. My main duty was to keep customers' loan files in order.
- My duties grew to include helping with clearing file exceptions, aiding lenders in getting documents from the loan files in our building, helping upload loans to LaserPro, and running the transactions involved in the opening of a new loan.
